

Geetha R – AWS DevOps Engineer

☎: +91-9663832581 | ✉: grs.geetha96@gmail.com | 📍 Mangaluru |  [LinkedIn](#)

10+ years experienced IT professional with proficiency in **System Administration and Network / Cloud Security**, expertise in configuring secure network architecture and production grade servers to smooth delivery of software to market value and **aspiring AWS DevOps Engineer** seeking an opportunity to contribute technical skills and passion for automation and cloud services in a dynamic and collaborative environment.

KEY SKILLS

Configuring Linux Web / Database Servers | Windows Active Directory Management | Network Security | Application Deployment | Automation | Containerization | Application Security | Technical Support

TOOLS & TECHNOLOGIES

Scripting Languages: Python, Shell | **Database Management System:** SQL, MongoDB, MySQL, AWS DynamoDB | **Container Platform:** Docker, Kubernetes | **Architecture:** Batch Processing, Event Driven, Microservices, Monolith | **Version Control:** Git, GitHub | **Build Tool:** Apache Maven | **Continuous Integration & Deployment:** Jenkins Pipeline, ArgoCD | **Infrastructure Management:** Terraform | **Configuration Management:** Ansible | **Application Monitoring:** Prometheus, Grafana | **Cloud Platform:** System Admin, AWS Cloud, DevOps, IAAS. | **Generative / Agentic AI:** Claude Code, Ollama, Docker Gordon, Github Copilot.

PROFESSIONAL EXPERIENCE

AWS Cloud Engineer Saspro Technologies	Mangaluru, IN 2023 – 2025
Assistant System Administrator AJIET	Mangaluru, IN 2019 – 2023
Technical Support Executive SJEC	Mangaluru, IN 2010 – 2016

AWS Cloud Engineer

- Migrating E-commerce and GPS applications to AWS to eliminate approximate \$ 50K on-premise hardware and software refresh cycle and reducing annual infrastructure cost by 35%
- Containerized a PHP and Java application using Docker and Kubernetes and deployed it across AWS EC2 and EKS services and improved the server response time by 75%.
- Successfully migrated on-premise ms-SQL database to Amazon RDS for high availability of customer transactions.
- Secured the AWS infrastructure by designing a multi subnet VPC and deploying AWS WAF and Web ACLs for protecting the customer data from web exploits.
- Achieved 99% application availability, isolated production data from public internet threats and improved database latency by 45%.

System administrator

- Managing campus wide servers / network infrastructure consisting of 300+ workstations, 10 Windows / Linux server and network security and maintaining 99% network / internet / system availability .
- Automated software and OS deployments across 10 computer labs using ‘network imaging’ and ‘configuration management’ tools, reducing manual system setup time by 80%.
- Optimized network performance for 2000+ students and faculty users by implementing firewall / proxy policies and custom Wi-Fi / LAN connections by using CISCO Network switches and Sophos Firewalls.

KEY PROJECTS EXECUTED

1. **Project:** Realtime Nominatim Geocoding Server for OpenStreetMap | **Duration:** JAN 2024 - **Present**

Technologies: AWS EC2 - Ubuntu 22.04, PostgreSQL, Nominatim, Pyosmium, Shell Scripting.

Key Achievement:

- Designed, deployed, and maintained a production-grade Nominatim Geocoding Server on AWS EC2 (Bahrain Region), delivering 99.99% service availability for GPS-based applications across GCC countries.
- Built and optimized a PostgreSQL-backed Nominatim database by importing GCC OpenStreetMap datasets from Geofabrik, achieving 99% geocoding accuracy for address-to-coordinate lookups.
- Automated 100% of daily OpenStreetMap data updates using Pyosmium, Bash scripting, and Linux Cron, eliminating manual intervention and ensuring up-to-date geospatial data.
- Optimized Linux server and PostgreSQL performance to support continuous API availability and reliable processing of large-scale geospatial datasets for production workloads.
- Implemented automated monitoring and scheduled maintenance processes, improving deployment reliability and ensuring 99.99% uptime for geocoding services supporting Gulf region customers.

2. **Project:** Kubernetes Production Deployment using Amazon EKS & GitOps | **Duration:** JAN 2026 – MAY 2026

Technologies: AWS, Amazon EKS Auto Mode, Kubernetes, Docker, ArgoCD, GitHub, GitOps, Helm, IAM.

Key Achievement:

- Provisioned a 100% managed Amazon EKS Auto Mode cluster, eliminating manual worker node management and streamlining Kubernetes administration.
- Deployed and managed 6+ Kubernetes resources (Deployments, Services, ConfigMaps, Secrets, Ingress, and Namespaces), achieving 100% successful application deployment.
- Automated 100% of application deployments using ArgoCD GitOps, reducing manual deployment effort by 85% through continuous synchronization with GitHub.
- Configured AWS Load Balancer Ingress and executed zero-downtime rolling updates, ensuring 100% application availability during deployments.
- Applied Infrastructure as Code (IaC) and Kubernetes production best practices while validating 100% of workloads using kubectl and the ArgoCD dashboard, improving deployment consistency and operational reliability.

EDUCATION

- **A.M.I.E – Computer Science and Engineering** | Institution of Engineers (India), Kolkata | 2016 | CGPA 7.00
- **Diploma – Computer Science and Engineering** | Department of Technical Education | 2008 | 70%
- **MCSE – Windows Server 2012** | Edureka Online | 2020 |
- **RHCE8 – Linux 8** | Edureka Online | 2021 |
- **CCNA – Switching and Routing** | ITTC, Mangaluru | 2022 |
- **AWS Solution Architect and DevOps Engineer** | MicroDegree, Mangaluru | 2023 |
